SUMMARY

Physics graduate (IISER Bhopal, ThinkSwiss fellow at EPFL) with 2.5 years inside AI training data work and the last year on Mercor, where I own frontier-model evaluation tasks from scoping to approved delivery on a premium program. Two Top Performer ratings. Co-founded a software startup and led a 200+ person team running central India's largest science festival.

EXPERIENCE

Mercor | *Engineering Writer, premium evaluation program (earlier Physics, Math and Research Expert)* Aug 2025 – Present

- Worked 25 contracts across physics, maths, biology, electrical engineering, quant, research, Hindi RLHF and Malayalam safety annotation, including PhD-level benchmark design. Earned 2 Top Performer ratings and moved from hourly review work into a premium per-task writing role.
- Own evaluation tasks end to end: scope the task, build the source pack, write the prompt, answer key and rubric, run the models, and take the task through reviewer and QA gates to approved delivery against fixed deadlines.
- Took over a task another writer had abandoned mid-pipeline, kept the approved work instead of restarting, and shipped it. Turned a reviewer's regression finding into a rubric fix that moved a stalled task into the next stage.
- Ran failure analysis across model runs: when two reworks showed computation was not the weak point, found the one failure that repeated (structural and formatting fidelity) and refocused the task on it.
- Built reusable standards so work is not redone: folder and file conventions, a source registration template, a difficulty design playbook and a pre-run checklist, since one stale input file can void a full set of model runs.

Nayrix Software Solutions | *Co-founder* 2025 – Present

- Built and launched CompEdge (compedge.nayrix.com), an AI competitive intelligence platform, from scope to live product on React, Supabase, Vercel and a Python report engine.
- Ran go-to-market end to end: LinkedIn content, Reddit outreach, n8n email automation and a warm-lead pipeline. A senior Big Four audit professional cleared a CompEdge report for client delivery.
- Client analytics for IMTC Qute Solutions Pvt. Ltd.: home-loan dashboard, competitor benchmarking, EMI calculator.

Outlier, Soul AI, AfterQuery | *AI Trainer and Task Author, Physics and STEM* Mar 2024 – Present

- Reviewed and rewrote model answers and reasoning traces in physics against detailed rubrics, and wrote gold answers used for fine-tuning. Worked to each platform's own guidelines, tools and quality bar.
- Author containerised science benchmark tasks with reference solutions and sealed verifiers, checked through automated difficulty, anti-cheat and quality review before acceptance.

RESEARCH

EPFL, Switzerland, ThinkSwiss Research Fellow (May–Jul 2024): built a U-Net deconvolution pipeline for LOFAR 2.0 radio images that beat the standard tool (WSClean) on morphological and statistical metrics.

Indian Institute of Astrophysics, Master's thesis (2024–25): built a multi-epoch quasar catalogue from SDSS DR16Q with an automated measurement and plotting pipeline.

Earlier: deep-learning radio image recovery (IISER Bhopal, 2023–24); interferometry and beamformer data work at GMRT, NCRA-TIFR (2022–23).

LEADERSHIP

- **Convenor, Singularity (2022–24)**, the largest science festival in central India: led a 200+ member team and an INR 5 lakh budget from planning to event day.
- **Science Council Secretary**, IISER Bhopal (2022–23); **Placement Coordinator**, Physics department (2024), working with visiting recruiters.

EDUCATION

IISER Bhopal, Integrated BS-MS in Physics, CGPA 8.1/10, top 10% 2020 – 2025
DST INSPIRE Fellow (2020–25); ThinkSwiss Research Scholarship (SERI, Switzerland).

SKILLS

Data and tools: Python (Pandas, NumPy, PyTorch), Excel modelling (named and protected ranges, cross-sheet logic), Git, Docker, LaTeX, n8n, Supabase, React.

Work: rubric and QA design, delivery against deadlines, failure analysis, writing clear specs for others.

Languages: English (full professional), Malayalam (native), Hindi (professional).
